

ABSTRACT

RECESSED LIGHTING FIXTURE.

5 This lighting fixture is made up of a translucent front plate (2) and a
recessed body (1) made from a high-resistance translucent material with ultraviolet
protection, which has a general tubular configuration and includes an inner transversal
wall (11) that separates a rear cavity (12), designed for housing the lighting elements (3),
from a front cavity (13), in which the front plate is mounted. This translucent front plate
10 (2), made from tempered glass or polycarbonate has at least one cut (21) on its side
surface for lodging part of the material that makes up the recessed body (1) while such
recessed body is being formed.
